Admin Panel — Access Management

1. Admin Access Control Overview

The Super Admin (SaaS Owner) oversees and manages all client-company admin accounts, ensuring secure, role-based access to the HRMS modules. This includes granting, updating, and revoking permissions, enforcing login policies, and ensuring auditability across tenants.

---

2. Assign Admin Access

🔍 **Select Client Company**

- Dropdown or auto-complete selector listing all active client companies under the SaaS umbrella.
- Once selected, display current admins for that company, plus action buttons like “Add New Admin” and “Bulk Upload Admins”.

➕ **Add New Admin**

A form to onboard a new company-level admin:

1. **Name** (required)
2. **Email** (required; validated format)
3. **Designation** (optional)
4. **Role Permissions** (radio/group of checkboxes):
    - **Full**: Access to all modules (HR + Payroll + Recruitment)
    - **HR only**
    - **Payroll only**
    - **Recruitment only**
    - *(Future-proof: ability to add custom or combination roles)*
5. **Status**: Active / Inactive toggle
    - *Inactive admins cannot log in but retain their configuration for reactivation.*
6. **Two-Factor Authentication**:

    - Checkbox or toggle (Yes/No) enabling mandatory 2FA.
    - Option to select method (e.g., SMS, Authenticator App).
7. **IP Whitelist (optional)**:
    - Input field(s) for specifying allowed IP addresses/ranges.
    - Helps enforce secure/geofenced logins.
8. **Save / Cancel** buttons
    - On saving, send invitation email with one-time link to finish setup.
9. **Audit Trail Logging**:
    - Log entry capturing Super Admin username, timestamp, and action details.

---

3. View Admins (By Client Company)

Once a company is chosen, display its admins in a searchable list/table:

- **Columns**:
    - Name
    - Email
    - Designation
    - Role(s)
    - Status
    - 2FA-enabled (Yes/No)
    - Last login
- **Filters**:
    - Company (if managing several simultaneously)
    - Role Permissions
    - Status (Active / Inactive)
    - 2FA status
- **Bulk Actions**:

- Activate / Deactivate
- Revoke 2FA
- Re-invite/cancel pending invites

---

4. Individual Admin Actions

Each admin row includes an “Actions” dropdown with:

🔒 **Revoke Access**

- Immediately disables login.
- Optionally archives the admin account for auditing.

🔄 **Reset Password**

- Sends a secure one-time link via email.
- Logs reset event in audit trail.

🕵️‍♀️ **Impersonate (“View As...”)**

- Enable the Super Admin to log in as that admin for troubleshooting.
- Must request password confirmation and log both start/end times with IP.

🖍️ **Edit Admin**

- Modify any settings: email, designation, role, 2FA, IP whitelist, status.

🗑️ **Delete Admin**

- Permanently remove admin access (if allowed)—use with caution.
- Option to soft-archive for record-keeping.

---

5. Audit & Compliance Features

- **Audit Log**:
  - Detailed, timestamped record of all access control actions.
  - Exportable CSV or PDF.

- **Compliance Reporting**:
    - Quick reports showing:
        - Active vs. inactive admins
        - 2FA adoption rates
        - IP restriction enforcement
        - Admin count per company

---

6. Security Best Practices & Recommendations

- **Principle of Least Privilege**: Encourage assigning minimal role permissions; custom roles, if needed.
- **Enforce 2FA**: Set policy requiring TFA for all active admins.
- **IP Restriction**: Use whitelisting in higher-risk environments.
- **Regular Review Cycles**: Prompt Super Admins monthly to review and revoke stale/inactive accounts.
- **Login Monitoring & Alerts**: Notify Super Admin on unusual login patterns or failed attempts.
- **Impersonation Safeguards**: Branding/banners + session auditing to ensure transparency.

---

7. UX Flow Suggestions

1. **Dashboard → Access Control** entry shows summary (e.g., "42 admins across 5 companies").
2. **Select Company** → reveal onboarding form, table, quick-stats (active, inactive, needs 2FA).
3. **Add New Admin** → inline form or modal with "Save" → confirmation modal + email sent.
4. **Filter/Search** → typeahead filters for quick retrieval.
5. **Action Dropdown** per row → context menu for key operations.

6. **Logs & Reporting** → accessible via separate tab or menu within Access Management.

---

8. Potential Enhancements

- **Bulk CSV Import** for large enterprises to onboard many admins.
- **Customizable Admin Roles** beyond the default four.
- **Integration with SSO/SCIM** for auto-provisioning and synchronization.
- **Expiration Settings** to automatically deactivate temporary or contract admins.
- **Mobile Admin App** for on-the-go configuration and access revocation.

✅ **Summary**

This comprehensive Access Management module empowers the SaaS Owner with:

- Clear, role-based onboarding of client company admins
- One-click controls for revoking, resetting, impersonating, or editing access
- Security-conscious design with 2FA, IP whitelisting, and audit trails
- Scalable features like role customization, bulk onboarding, SSO sync
- A user-friendly and secure interface that aligns with compliance and best practices
