Overview & Objectives

Purpose:
Empower SaaS owners to manage client accounts, monitor subscription status, and control client-level permissioning from a unified "Super Admin" interface.

Goals:

- Offer full lifecycle client management (create, update, suspend, delete)
- Provide visibility into plan usage, admins, and account health
- Enforce security via RBAC, least privilege, MFA, and audit trails cloudeagle.aireco.ai+1vertice.one+1

---

2. Client Management Dashboard

2.1 View All Clients

A table with filters (by status, plan, industry) and these columns:

- **Company Name**
- **Contact Person**
- **Subscription Plan** (Free / Standard / Enterprise)
- **Active Admins** (count)
- **Status**: Active / Suspended / Pending Setup
- **Actions**:
    - **View** – go to client's detailed page
    - **Edit** – modify client settings
    - **Suspend** – temporarily disable access
    - **Delete** – permanently remove after confirmation

Best Practices:

- **Centralized inventory** for quick oversight aalpha.net+10zluri.com+10vertice.one+10
- Surface **searchable, sortable columns** for efficient filtering

2.2 View Client Details

On “View”, show:

- **Client metadata** (plan, user count, active admins, onboarding date)
- **Admin list** (with roles, contact info, last login, MFA status)
- **Usage stats** (subscription expiration, license usage)
- **Audit trail** (actions taken: logins, admin adds/removes)

Best Practices:

- Implement **RBAC** so only Super Admins see sensitive logs reddit.comaalpha.netcloudeagle.ai+2reco.ai+2vertice.one+2
- Use **audit logs** for compliance zluri.com

---

3. Add New Client Workflow

3.1 Primary Form (Company Info)

- **Company Name** (required)
- **Company Email** (prefilled or input)
- **Industry Type** (dropdown taxonomy)
- **Subscription Plan** (Free / Standard / Enterprise)
- **Number of Employees** (informs billing limits)

3.2 Setup Primary Admin

Inside same flow:

- **Full Name**
- **Email**
- **Phone**
- **Role**: Client Admin, HR, Manager, Read-Only (predefined RBAC roles) reco.ai
- **Credentials**: either temporary password or email invite link

Best Practices:

- Enforce **least privilege**—grant only necessary permissions vertice.one+5reco.ai+5bettercloud.com+5
- Integrate **MFA/Security checks** on sign-up jumpcloud.com+2cloudeagle.ai+2reco.ai+2
- Support **SSO integration** for seamless onboarding vertice.one+1reco.ai+1

---

4. Edit / Suspend / Delete Client

4.1 Edit Client

Allow updates to company data, plan, employee count, primary admin settings, and billing triggers. If changing plans downward, pop a warning about license limits.

4.2 Suspend Client

Suspend removes data access but retains account metadata. Prompt confirmation modal:

"Suspending will lock all client users and billing. Clients can be reactivated later."

4.3 Delete Client

Permanent removal: warning modal requires typing the company name for confirmation. Ensure related data is archived per retention policy.

Best Practices:

- **Soft delete/suspend** to preserve data integrity and audit history aalpha.net
- Maintain clear **compliance data cleanup** protocols

---

5. Access Control & Security

5.1 RBAC

- Predefined roles: Client Admin, HR, Manager, Read-Only
- Super Admin only editable by SaaS owner

Best Practices:

- Enforce **least privilege** principle vertice.one+3reco.ai+3cloudeagle.ai+3

- Support **time-bound elevated access** for temporary tasks overcode.tech+5cloudeagle.ai+5reco.ai+5

5.2 Multi-Factor Authentication

Optionally enforce MFA at client admin role creation to reduce misuse bettercloud.com+6cloudeagle.ai+6reco.ai+6

5.3 Audit & Monitoring

Log events for admin creation, suspension, role changes, deletes. Enable the Super Admin to export logs for compliance vertice.one

5.4 Zero Trust / Centralized Identity

Consider integrating IDaaS / IAM provider for SSO across clients vertice.one+2jumpcloud.com+2reco.ai+2

---

6. Usability & Workflow

6.1 Notifications

- Email invite to new admin with magic link or temp password
- Alerts on role changes or plan downgrades
- Suspension/reactivation notifications

6.2 Search & Filter

Advanced filtering (by subscription, status, industry) plus quick search elevates UX

6.3 Bulk Actions

Select multiple clients to **bulk suspend/reactivate** or **export**, with confirmation prompts

6.4 Internationalization & Localization

Support multi-language labels and date/number formatting as needed

---

7. Audit, Review & Maintenance

7.1 Periodic Review

Quarterly audits to detect orphaned or over-privileged client admins jumpcloud.com

7.2 Log Retention Policy

Define reasonable retention for deleted clients and logs (e.g., 1 year aggregate, 3 years detailed)

7.3 Reporting

Generate reports like:

- Active subscriptions per plan
- Average admin count/client
- Suspended accounts over 90 days

7.4 Compliance

Ensure access and audit configurations support GDPR, SOC 2, etc.

---

8. Summary of Best Practices

Principle	Implementation
Centralized client inventory	Table + search/filters
RBAC + Least privilege	Predefined roles
MFA / SSO	On new admin
Audit logs + access reviews	For compliance
Soft deletion & suspension	Safety first
Bulk actions & notifications	Efficiency
Periodic audits & retention	Governance

---

9. Final Notes

- **Security is non-negotiable:** Implementation of MFA, audit logs, and least-privilege roles is crucial to safeguard all client data and access.

- **Scalable and granular UI:** Provide powerful search, filters, bulk operations, and client-level dashboards to support administrative efficiency as client base grows.
- **Compliance-ready architecture:** From audit logs to data retention policies, design the panel to support regulatory requirements out-of-the-box.
