Communication Settings:

---

1. Send Welcome Email to Client Admin 🎉

Purpose: Immediate first touchpoint to set expectations and ensure a smooth onboarding experience.

- Use a clear, branded subject line like “Welcome to [Your SaaS Name]! Here’s Your Admin Access”.
- Include account details: name, role, login URL, temporary password or setup link.
- Provide next steps: “Log in and explore these key features,” with CTA buttons (“Access Dashboard”, “Set Your Password”).
- Optionally, include a personal note from the founder or customer success rep for warmth tabular.email+1flodesk.com+1encharge.io.
- Ensure this email is triggered automatically upon admin creation.

---

2. Configurable Notification Templates

Allow the SaaS Owner to edit the content for these essential templates:

a) Invite Email

- Trigger: adding a new client admin or team member.
- Key elements: invite link, instructions, redemption deadline.
- Best practice: use simple, personalized copy with a recognizable sender. Include dynamic fields (e.g. {{name}}, {{expiry_date}}).

b) Password Reset

- Trigger: user requests password reset.
- Essential inclusions: clear reset link, expiration time, safety note.
- Suggestion: offer three email variations—link-based, temporary password, confirmation email—with custom tone documentation.sailpoint.comengagebay.com+1docs.softr.io+1.

c) Access Revoked

- Trigger: when admin or user permissions are revoked.
- Tone: firm but courteous. Explain the action, effective time, and next steps (like who to contact if needed).
- Security reminder: advise them to save their data or request help if they need re-access.

---

3. Enable/Disable Email or SMS for Specific Actions

To give the SaaS Owner full control, build toggle switches under "Communication Settings":

Action	Email	SMS
Welcome Email	[✔]	[ ]
Invite Email	[✔]	[ ]
Password Reset	[✔]	[✔]
Access Revoked	[✔]	[✔]

- **SMS support** enhances critical alerts (password reset, access revoked) especially for urgent security scenarios.
- Include a timestamp in each communication, e.g., “sent on June 15, 2025, at 14:32 UTC” to avoid confusion.
- Provide audit logs for each notification: who received it, via which channel, when it was sent.

---

4. Suggested Add-Ons

- **Localization & Branding**: Let Owners upload their logo, use company colors, and localize templates into multiple languages .
- **Preview & Test Send**: Include a "Send Test Email/SMS" feature so admins can preview content before enabling at scale.
- **Compliance Notes**: Add GDPR/TCPA consent opt-ins where SMS is used; include unsubscribe links and privacy policy references.

- **Link Analytics**: Let Owners optionally track opens and link clicks to better monitor engagement and onboarding flows.
- **Fallback Logic**: If an SMS fails, auto-trigger email as backup (and vice versa).

---

5. Best Practices & Security Measures

- **Role-Based Access (RBAC)**: Only the Super Admin can edit notification settings. Clients and sub-admins have restricted visibility overcode.tech+12cloudeagle.ai+12stripo.email+12.
- **Least Privilege Principle**: Admin accounts should match their actual job roles, with elevated access granted only when needed .
- **MFA Enforcement**: Encourage or mandate multi-factor authentication during onboarding to strengthen account security cloudeagle.ai.
- **Review & Audit**: Include a communication audit page listing what templates were active, who triggered them, and last update time.
- **Zero Trust Approach**: Automatically expire invite links and reset tokens; define time limits (e.g. 24 hrs for invites, 60 minutes for password reset) community.auth0.com+1stripo.email+1.

---

6. UI/UX Elements to Implement

- **Dashboard "Communication Settings" page**
    - Sections for each template with inline WYSIWYG editors.
    - Channel toggles (email/SMS), test send buttons, and reset-to-default options.
    - Live preview pane.
- **Audit Log Section**
    - Chronological list of sent notifications (action, recipient, channel, status, timestamp).
    - Exportable to CSV for compliance reporting.
- **Policy Defaults & Overrides**

- Provide recommended default settings (enabled email for all; SMS for critical actions).
- Allow toggles to deviate per client/company policy.

---

7. Summary of Owner Benefits

✅ **Brand Consistency** — Branded, localized communications strengthen user trust.

✅ **Communication Control** — Owners can tailor tone and channel mix to suit user segments.

✅ **Compliance-Ready** — Built-in opt-in/opt-out, audit logs, and timestamping protect legal standing.

✅ **Security & Responsiveness** — Controlled invites, MFA, token expiration, and SMS support tighten security posture.

✅ **Efficient Support** — Test send, analytics, and fallback mechanisms reduce errors and friction in onboarding.
