1. Dashboard (Overview)

• Total Clients Onboarded

- Display a counter of all organizations using the platform.
- Option to filter by onboarding date, plan type, or industry category.

• Active vs Inactive Clients

- Real-time pie or bar chart showing active vs inactive trial/paid clients.
- Time-series view to analyze activation trends over selectable intervals.

• Pending Admin Access Requests

- Live list of admin users awaiting approval.
- Include key details: requesting user's name, organization, requested role, time of request.
- Approve/reject buttons with audit logging and bulk action support.

• Recent Activity Logs

- Feed of high-level system events: logins, permission changes, client creation/deletion, role modifications.
- Filter and search by client, user, event type, or date-range.

• System Health & Usage Metrics

- Uptime dashboard with key service availability metrics (e.g., API and UI).
- Usage KPIs: daily active sessions, average response time, error rates.
- Adjustable timeframe and alert thresholds for each metric.

⚙️ **Additional Recommendations**

2. Access & Role Management

- **Hierarchical Roles**: Define roles like “Super-Admin”, “Client-Admin”, “Auditor,” each with distinct permissions.
- **Role Templates**: Pre-built role templates that can be cloned or customized.

- **Fine-grained Controls**: Role-level toggles for actions like "manage billing", "approve users", and "view detailed logs".

3. Magic Login (“Login As Client Admin”)

- Secure “magic link” or “impersonate” feature to troubleshoot issues in a client’s context codecanyon.net+2medium.com+2linkedin.com+2linkedin.com+1docs.terrastories.app+1superworks.com.
- Full visibility into consented sessions, with audit logs and immediate exit controls.

4. Subscription, Plan & Quota Management

- Overview of each client's plan details: type, active period, allowed user count/quota, usage statistics.
- Manual or automated adjustments, credits, one-time overrides, discount/coupon issuance .

5. Content & Policy Editor

- Editable CMS-style interface for updating Terms & Conditions, Privacy Policy, cookie banners, retention policies without code changes medium.com.

6. Backup & Retention Settings

- Scheduling and status tracking for backups per client.
- Policies for data retention, archiving inactive accounts, or adhering to regulatory hold requirements qlik.com+2superworks.com+2peoplemanagingpeople.com+2.

7. Multi-Tenant Hierarchy Management

- Visual tree for organizations and sub-units, with client-level role assignment.
- Tools to create, rename, archive or delete tenant accounts with alerts and audit logs .

8. Feature Flags & A/B Testing

- Global or client-specific toggles to enable/disable experimental features or releases.
- Ability to design A/B tests and monitor impact via usage metrics, enabling controlled rollouts .

9. Alerts & System Notifications

- Configurable alert system for unusual behaviors (e.g., login failures, elevated error rates).
- Email/webhook integrations for admin or DevOps teams to respond efficiently.

10. Analytics & Reporting

- Prebuilt and custom reports on user activity, client adoption, system usage, performance trends.
- Export to CSV/PDF and scheduling or automated delivery of reports to key stakeholders.

🧭 **Summary Overview**

Feature Area	Purpose	Key Elements
Dashboard	Real-time insights at a glance	Total clients, activity requests, health metrics
Access Control	Manage multi-tier security	Role hierarchy, login-as tools
Subscription Tools	Control billing & quotas	Plan management, credits, discounts
Content Editor	Policy compliance autonomy	WYSIWYG editor
Data Safeguards	Compliance & recovery	Backups, retention
Tenant Management	Organizational control	Multi-tenant tree, role mapping
Feature Flags	Controlled rollouts	Global/client-level toggles
Alerting System	Proactive monitoring	Configurable alerts
Analytics	Data-driven oversight	Reports, exports

Suggested Development Workflow

1. **Polished Dashboard UI** with interactive charts, filters, and quick action buttons.
2. **RBAC infrastructure**, including role templates and permission toggles.
3. **Secure impersonation (“Magic Login”)**, with strict audit logs.
4. **Subscription & quota panel** with override, upgrade/downgrade paths.
5. **Content management system** for legal/IT teams to update policies.
6. **Feature-flag backend**, leveraging tools such as LaunchDarkly or DIY modules.
7. **Alerting integration** via email, Slack, or webhooks.
8. **Reporting engine** with export and scheduling capabilities.
