Settings Overview

This panel allows the SaaS owner to centrally manage branding, licensing, features, and data policies on a per-client basis. It equips owners with granular control across client workspaces.

---

2. Branding Options for Client Panel 🎨

What should be configurable:

- **Logo**: Upload client-specific logos.
- **Theme**: Customizable color palette, fonts, and layout.
- **Subdomain**: Assign URLs like client.companyhrms.com.

Why it matters:

- Reinforces client identity.
- Enhances adoption through tailored UI/UX.
- Simplifies multi-tenant deployment.

Considerations:

- Support various image types/sizes.
- Preview capability before publishing.
- Lock branding options once live.
- Audit trail of branding changes.

---

3. License Expiry & Renewal Settings

Key components:

- **Expiry Date**: Set client subscription expiry.
- **Notifications**: Automated reminders to admin and client.
- **Grace Period**: Define post-expiry access terms.
- **Renewal**: Options for auto-renewal or billing integrations.

Value-add:

- Maximizes renewal rates and revenue.
- Prevents tenant lockouts due to non-payment.
- Streamlines renewals via integrations with payment or subscription platforms (e.g., Stripe, Chargify).

Best practices:

- Show license status prominently on dashboard.
- Provide ready-to-send renewal emails.
- Track licenses per module or tier.

---

4. Feature Toggles (Module Control)

What admins can manage:

- Enable/disable features (e.g., Leaves, Payroll, Recruiting) per client.
- Configure feature sets per license tier.
- Include optional add-ons available for activation.

Why use this:

- Tailors platform capabilities to client needs.
- Enables tiered pricing strategies.
- Limits exposure to untested modules or features.

Implementation tips:

- Centralize toggles in an “Modules” panel.
- Require data migration or disable UI/UX when a module is turned off.
- Log changes to audit access patterns.

---

5. Data Retention & Export Options

Control types:

- **Retention Policies**: Define how long data is kept (e.g., Payroll: 7 years).
- **Auto-delete**: Scheduled purging of expired data.
- **Manual export**: Allow CSV/PDF exports by admins.
- **Bulk export**: Include archived or archived client data.

Why it matters:

- Meets GDPR, ISO, and local compliance.
- Empowers clients to manage their historical data.
- Reduces storage costs and avoids data bloat.

Best practices:

- Display expires-on dates for records.
- Notify clients before deletion.
- Allow retentions overrides when legally necessary.
- Log all metadata exports and deletions.

---

6. Access Management & Security Controls

What to include:

- **User roles**: Super-admin vs. client admin.
- **Permissions matrix**: Control who can change settings.
- **Multi-factor authentication (MFA)**.
- **Session and login policies**.

Why it's critical:

- Enforces least-privilege principle.
- Adds protection via MFA and session controls.

Implementation tips:

- Show role-based access in settings UI.
- Integrate third-party identity providers (SSO, OAuth).

- Log admin actions in an audit trail.

---

7. Audit & Logging

- Track and timestamp every admin action.
- Provide an audit log viewer with search and filter.
- Enable downloads of logs for compliance reviews.

---

8. Monitoring & Alerts

- **Dashboard** highlights expiring licenses, inactive modules, or policy non-compliance.
- **Alerts** via email/SMS/webhook for critical events (e.g., impending license expiry).
- **Reports** scheduling: weekly snapshots per client.

---

9. UI/UX & Usability

- **Dashboard layout**: Clean with tabs for Branding, Licensing, Modules, Data, Security, and Logs.
- **Inline help**: Tooltips and contextual tips.
- **Preview modes** for branding.
- **Batch actions**: Enable/disable features for groups of clients.

---

10. Technical Considerations

- **Multi-tenant architecture**: Isolate settings and data per client.
- **Customizable metadata**: Allow adding client-specific fields.
- **Config versioning**: Safely roll back changes.
- **API-driven**: Provide REST endpoints for managing all settings for automation.
- **Performance**: Ensure responsive UI and low latency for updates.

---

11. Compliance & Legal

- Configure **data privacy options** (e.g., anonymization, consent management).
- Include acceptance of terms-of-service and privacy policies.
- Capture timestamped client approvals of policy changes.

---

12. Suggested Enhancements

- **White-label themes** with CSS package uploads.
- **Sandbox mode**: Clients can test features before enabling.
- **Usage analytics**: If a module is unused for 90 days, suggest deactivation.
- **Interactive wizards** for onboarding or setup.
- **Audit log integrations**: Export logs to SIEM/Splunk.

✅ Summary Table

Setting	Purpose	Admin Control
Branding Options	Customize client identity	Logo, theme, subdomain
License & Renewal	Manage subscriptions	Expiry, renewal, grace, billing
Feature Toggles	Enable modular access per client	Module on/off, tier-specific
Data Retention & Export	Manage data lifecycle and compliance	Policies, exports, auto-delete
Access Management	Secure panel configuration	Roles, MFA, SSO, session control
Audit & Monitoring	Log actions and alerts	Logs viewer, dashboard, alert config

---

📌 Relevant Best Practices & Industry Notes

- **Access Management**: Emphasize authentication, role-based permissions, and auditability to ensure correct user provisioning and security vendr.com+2jumpcloud.com+2techtarget.com+2servicenow.com+4cisco.com+4kpmg.com+4medium.comtechtarget.com.
- **License Modules**: Enable SaaS providers to optimize usage by dynamically enabling/disabling modules per tenant.
- **Data Retention**: Retain data only as long as legally required, and purge proactively to reduce compliance risks and storage consumption.
