HR Clouds — Employee Panel Frontend & UI/UX Audit Report

Role audited: Employee · **Account:** rishi@gmail.com (test account) · **Organisation:** HR-Vista Soft Solutions Private Limited (role `employee`)

Environment: https://frontend.dev.hrclouds.in/ · **API base:** https://development.hrclouds.in/api/v1

Audit date: 2026-10-14 (IST) · **Method:** Read-only. Live-browser UI walkthrough (no form submitted, no punch, no download clicked; modals opened and Cancel-closed) + direct read-only API capture (1 login POST + 1 org-selection POST + GETs only).

Note on the second workspace: the account belongs to 2 orgs, both role `employee`. This audit covers HR-Vista only; Compunic Private Limited was not audited.

Privacy: PAN, UAN, contact numbers, addresses, dates of birth and bank identifiers are redacted from all deliverables (`[REDACTED PII]`). Stored script-text payloads are described, not reproduced. Tokens/credentials were transient and are not stored anywhere in this package.

Companion files: `network-capture.json` (55 redacted records), `api-ui-data-mapping.json`, `findings/*.md` (24 findings), `evidence/regularizations-duplicate-rows.png`, `employee-panel-findings.xlsx`.

1. Executive Summary & Health Score

• **Overall UI/UX Score (1–10): 6** (browser assessment; consistent with findings below)

• **API Data Utilization Score (1–10): 5** — the API returns far more employee-centric data than the UI shows (shift/grace/policy detail, trends, weekly calendar, statutory breakdown, tax projection, anomalies, hierarchy), while several rendered numbers contradict their own detail endpoints.

• **Top 3 Critical Frontend Issues:**

1. **Stored script-text payloads** in profile address and a leave reason reach the UI as raw markup (E-01, Critical/security).

2. **Negative effective hours** (`-0.04`) with a formatted `-1h 58m` duration and an `absent` status on a day with punches (E-02).

3. **Sick Leave balance does not add up** — 10 accrued − 2 used shows as balance 10 (E-03).

• **Top 3 High-Value UI/UX Enhancement Opportunities:**

1. **Shift progress bar + live countdown** from the shift/grace/policy data the API already returns.

2. **Leave balance breakdown cards** (accrued / used / pending / carried-forward) with a progress ring, document-threshold and sandwich-rule hints.

3. **Anomalies inbox with one-tap regularization** — 96 unresolved anomalies currently sit behind a plain list.

Headline counts: 52 swept endpoints (40+ ×200) + 3 detail/PDF checks = 55 captured records. **24 findings:** 1 Critical, 6 High, 12 Medium, 5 Low (counting E-01 Critical; E-02–E-07 High; E-08–E-19 Medium; E-20–E-24 Low). No data was created, modified or deleted. Console errors and per-action DevTools network timelines are **NOT VERIFIED** (no DevTools in tooling) — see §5.

What is genuinely good: login + org selection work cleanly; the payslip PDF endpoint works (200, 92,908 bytes, correct filename); most employee endpoints return 200 with rich, well-shaped payloads; the Sep payslip carries an honest `not_applied` statutory note in the API; the tax projection correctly applies rebate 87A (zero liability is legitimate, not a bug).

2. Page-by-Page Audit & API Parity

2.1 Employee Dashboard & Punch Widget — `/dashboard/employee`

• **Triggered API Endpoints:** `GET /attendance/today`, `GET /attendance/shift`, `GET /attendance/summary?month&year`, `GET /leaves/my-balances`, `GET /attendance/holidays`

• **Data Parity Analysis:**

Backend API Key	Backend Value	Frontend Rendered Value	Status
`today.status`	`absent` (with punches)	Absent	Bug (see E-02)
`today.effective_hours`	`-0.04`	Negative / contradictory duration	Bug (E-02)
`today.shift.{start,end}_time`	`09:30:00` / `18:30:00`	Shift times shown; no progress bar / countdown	Ignored
`shift.policy` (via overtime record)	grace 15 min, full-day 7.5 h, half-day 4.5 h	Not shown	Ignored
`summary.attendance_percentage`	`66.67`	Shown without explanation of `final_*` counts	Partial
`summary.final_leave_days`	`12` (includes holidays + weekly offs)	Shown as leave	Bug (E-21)

• **UI/UX Observations:** summary cards exist but do not explain their inputs; no live timer, shift progress, or break state from `active_break`/`breaks`.

• **Backend Data Utilization Suggestion:** render a shift progress bar (09:30 → 18:30, Asia/Kolkata), a live "time remaining" countdown, grace-period indicator (15 min), and a break timeline from `breaks[]`. Add a streak/punctuality widget from `/attendance/trends` (current streak, punctuality, avg hours).

2.2 My Attendance & Logs — `/dashboard/employee/attendance` (+ anomalies / comp-offs / overtime / regularizations)

• **Triggered API Endpoints:** `GET /attendance/history`, `GET /attendance/daily-log`, `GET /attendance/graph-data`, `GET /attendance/weekly-calendar`, `GET /attendance/trends`, `GET /attendance/anomalies/mine`, `GET /attendance/regularizations`, `GET /attendance/overtime/mine`, `GET /attendance/comp-offs/mine`

• **Data Parity Analysis:**

Backend API Key	Backend Value	Frontend Rendered Value	Status
`daily-log.worked_duration_formatted`	`-1h 58m`	Negative duration	Bug (E-02)
`history[2026-10-03].status / effective_hours / late_minutes`	`half_day` / `0` / `322`	Half-day row	Bug (E-24)
`anomalies.total`	96, all unresolved	List, no resolution flow	Ignored
`regularizations`	15, incl. 3 identical 31 Dec 2026 rows	Duplicated rows visible	Bug (E-11)
`overtime`	90 min + `early_exit_minutes` 30, same record	Not reconciled	Bug (E-24)
`comp-offs summary`	All zeros	Blank counters	Partial (E-17/E-30)
`trends.punctuality_percentage`	`87.8` vs summary `83.33`	Not shown / conflicting	Bug (E-23)
`weekly-calendar`	Week 12–18 Oct, total 7.6 h (incl. –0.04)	Calendar	Partial

• **UI/UX Observations:** calendar and lists render; regularization modal was inspected (fields present) and closed without submitting. Evidence screenshot: `evidence/regularizations-duplicate-rows.png` shows the duplicated 31 Dec 2026 and 1 Sep 2026 Cancelled rows.

• **Backend Data Utilization Suggestion:** one-tap "Regularize this anomaly" per anomaly row; geofence explanation for the 415 km out-of-bounds flags; weekly-calendar heatmap; punctuality/streak widget with one definition of punctuality.

2.3 My Leaves & Balances — `/dashboard/employee/leaves`

• **Triggered API Endpoints:** `GET /leaves/my-balances`, `GET /leaves/my-leave-types`, `GET /leaves/my-requests`

• **Data Parity Analysis:**

Backend API Key	Backend Value	Frontend Rendered Value	Status
`balances[Sick].total_accrued / total_used / current_balance`	`10.00` / `2.00` / `10.00`	`10` available	Bug (E-03)
`balances[Annual]`	`15.00` / `4.00` / `11.00`	`11`	OK
`balances` breakdown	accrued / used / carried / lapsed	Single static number only	Ignored
`leave_types[].config`	accrual_type, probation 90 d (Paternity), doc threshold 3 (Sick), sandwich_rule	Not shown	Ignored
`requests`	10 rows; 1 day-count mismatch	Table with status pills	Bug (E-10)
`requests[].reason`	Contains stored script-text (1 row)	Rendered as text	Critical (E-01)
`requests[].document_url`	`storage.example.com` placeholder	Link	Bug (E-16)
`leave_type.code`	`ECL_2026`, `PAT_2026`	Raw codes shown	Bug (E-20)

• **UI/UX Observations:** balance cards are visually clear but single-number; status pills readable; Apply Leave form inspected and closed without submitting; no approver preview data, no pending-approval split, no document-threshold hint.

• **Backend Data Utilization Suggestion:** per-type progress ring (accrued → used → pending → available) + carried-forward/lapsed lines; leave calculator ("Nov 15–16 = 2 days, needs document if Sick > 3 days, sandwich rule applies for LWP"); pending-approval deduction preview before submit.

2.4 Payroll & Payslips — `/dashboard/employee/payroll/my-salary`, `my-payslips`, `tax`, `loans`, `reimbursements`

• **Triggered API Endpoints:** `GET /payroll/me/salary-structure`, `GET /payroll/me/salary-structure/history`, `GET /payroll/me/payslips`, `GET /payroll/me/payslips/{run_id}`, `GET /payroll/me/payslips/{run_id}/pdf`, `GET /payroll/me/tax/*`, `GET /payroll/me/loans`, `GET /payroll/me/adjustments`, `GET /payroll/me/bonuses`, `GET /payroll/me/benefits`, `GET /payroll/me/bank-account`, `GET /payroll/me/reimbursements/*`, `GET /payroll/me/encashments`

• **Data Parity Analysis:**

Backend API Key	Backend Value	Frontend Rendered Value	Status
`salary.monthly_gross`	`118750.00` vs figures `125000.00`	Earnings 118750 vs Gross 125000	Bug (E-08)
`statutory.pf_employee_amount`	`1800.00`	PF 1800	OK; EPS split wrong (E-07)
`statutory.eps_amount`	`1800.00` (= PF, should be ~1250)	Not split	Bug (E-07)
`payslips[Sep].statutory_status`	`not_applied`	Not warned in list	Bug (E-05)
`payslips[Sep].figures.total_deductions`	`7733.19`	List shows `N/A`	Bug (E-15)

Backend API Key	Backend Value	Frontend Rendered Value	Status
`payslips[Sep].figures.overtime_minutes / overtime_amount`	`60` / `0.00`	Not reconciled	Bug (E-24)
`tax.monthly[2026-09]`	All `0.00`, paid=true	PF 0	Bug (E-04)
`tax.projection.hra_received / hra_exemption`	`0.00` / `0.00` (HRA is 31250)	Not shown	Bug (E-14)
`loans[0].outstanding + recovered`	`60747.58` > principal `60000`	Loan card	Bug (E-13)
`adjustments.upcoming`	3× bonus 8000 + 3× recovery 2500 (Dec)	Upcoming list	Bug (E-06)
`benefits / reimbursements / encashments`	All empty	Empty tables	Partial
`payslip PDF`	200, 92,908 bytes, `payslip_2026-09.pdf`	Download works	OK

• **UI/UX Observations:** salary breakdown is readable; payslip detail exists; PDF works. Currency formatting was not flagged as broken in the UI pass; the defects here are value-level, not format-level.

• **Backend Data Utilization Suggestion:** statutory explainer (PF/ESI/PT split with the EPS correction), "why is my net pay this?" reconciliation (gross – LOP – deductions + reimbursements), tax planner from the projection (monthly TDS, rebate status, HRA exemption), loan amortisation schedule from the instalments endpoint, upcoming-adjustments de-duplicated timeline.

2.5 My Profile & Documents — `/dashboard/profile`, `/dashboard/employee/documents`

• **Triggered API Endpoints:** `GET /organizations/me`, `GET /documents/me/documents`, `GET /documents/me/hr-documents`, `GET /documents/templates`, `GET /organizations/me/job-profile` (404), `GET /organizations/profile` (404), `GET /documents/me` (404)

• **Data Parity Analysis:**

Backend API Key	Backend Value	Frontend Rendered Value	Status
`me.current_address`	Stored script-text	Rendered as text	Critical (E-01)
`me.reporting_person_details.name`	Email address	Email shown as name	Bug (E-22)
`me.avatar_url`	`null`	Initials / placeholder	Partial
`me.employee_code`	`EMP=002`	Shown verbatim	Bug (E-22)
`documents` / `hr-documents` / `templates`	`total: 0` each	Empty repository	Bug (E-16)

• **UI/UX Observations:** Edit Profile form inspected and closed without saving. No profile-completion percentage or missing-document flags are surfaced (the API does not return them either — a gap on both sides).

• **Backend Data Utilization Suggestion:** profile-completion meter + missing-document checklist; manager/department-head contact cards from `reporting_person_details` / `department_head_details`; document-request flow for the empty repository.

2.6 Company Calendar & Holidays — `/dashboard/employee/company`, `/dashboard/employee/org-chart`, `/dashboard/employee/company-documents`

• **Triggered API Endpoints:** `GET /attendance/holidays`, `GET /organizations/details`, `GET /organizations/hierarchy`, `GET /organizations/departments`, `GET /organizations/locations`

• **Data Parity Analysis:**

Backend API Key	Backend Value	Frontend Rendered Value	Status
`holidays`	16 rows; `Invalid Day Holiday`; Diwali/Dussehra `optional`	List	Bug (E-21)
`holidays upcoming`	Festival Holiday 15 Oct (public, tomorrow)	Not highlighted	Ignored
`hierarchy`	Real names available	Root name = email in places	Bug (E-22)
`details.stats`	dept 9 / locations 15	vs lists 16 / 18	Bug (E-23)

• **UI/UX Observations:** holiday list renders; no optional-vs-mandatory filter, no countdown to the next holiday, no team birthday/anniversary widget observed.

• **Backend Data Utilization Suggestion:** "Next holiday in N days" countdown card; optional/mandatory filter; org-chart mini-widget ("Your manager", "Your team") from the hierarchy payload.

2.7 Tasks, Comp-offs, Reimbursements, Benefits (supporting modules)

• **Tasks** (`GET /tasks/me`): 3+ tasks render, including an injection-probe task (E-01) and a cancelled task; `is_viewed=true` with null `viewed_at` timestamps (E-24). Suggestion: task progress/comments from `comments_count`, due-date countdown.

• **Comp-offs** (`GET /attendance/comp-offs/mine*`): all zeros; blank counters (browser). Suggestion: "How to earn a comp-off" empty-state explainer.

• **Reimbursements** (`GET /payroll/me/reimbursements/*`): claims and categories both empty — the claim form has no categories to offer. Suggestion: seed categories or hide the form until categories exist.

• **Benefits** (`GET /payroll/me/benefits`): 0 enrollments, 0 deducted. Suggestion: benefits enrolment CTA instead of an empty table.

3. UI/UX & Data-Rendering Defects Log

Full detail per finding in `findings/*.md`. Summary:

ID	Location / Component	Severity	Description	Expected Fix
E-01	Profile address, leave reason, task description	Critical	Stored script-text / injection-probe payloads returned verbatim	Sanitise on write, encode on render, purge seed probes
E-02	Attendance today / daily-log	High	`effective_hours -0.04`, formatted `-1h 58m`, `absent` with punches	Clamp at 0, flag insufficient punch
E-03	Leave balances	High	Sick 10 – 2 shows balance 10	Fix computation + invariant test
E-04	Tax monthly	High	Sep paid but all tax fields 0; YTD = Aug only	Recompute Sep statutory/tax
E-05	Payslip Sep	High	Statutory `not_applied`; net excludes PF/ESI/PT/TDS; `paid_at` null	Label prominently; consistent statutory
E-06	Adjustments / bonuses upcoming	High	3× identical bonus + 3× recovery; `TEST_PERF_BONUS` test row	Deduplicate; remove test rows
E-07	Salary statutory / Aug payslip	High	EPS = PF (1800 / 696.77), should be 8.33% of PF wage	Compute EPS correctly

ID	Location / Component	Severity	Description	Expected Fix
E-08	Salary structure	Medium	`monthly_gross` 118750 vs figures 125000	One gross definition
E-09	Leave types / balances	Medium	Paternity balance for female-profile; ECL missing from applicable types	Eligibility filtering; single source
E-10	Leave requests	Medium	Nov 15–16 = 2 days, `total_days` 1.00	Validate days vs range
E-11	Anomalies / regularizations / overtime	Medium	Future 31 Dec 2026 records, incl. approved	Reject/quarantine future dates
E-12	Attendance breaks	Medium	3 × ~1 s breaks stored as 1 min each; break 3 min > 23 s session	Store seconds; round at display
E-13	Loans	Medium	Outstanding + recovered 60747 > principal 60000; next due stale May	Split principal/interest; sync schedule
E-14	Tax projection	Medium	HRA received/exemption 0 despite HRA 31250; estimates 15L vs 7.9L	Feed HRA in; one definition
E-15	Payslip list / tax page	Medium	Deductions `N/A` vs detail 7733.19; Tax PF 0 vs salary PF 1800	Render from detail figures
E-16	Documents	Medium	Repository 0/0/0; leave doc URL is `example.com` placeholder	Link real docs; validate URLs
E-17	Anomalies	Medium	96 total, all unresolved; 415 km out-of-bounds	Anomalies inbox + one-tap regularization
E-18	API surface	Medium	403 on 3 endpoints; 404 on 7 bundle paths	Scoped variants; prune dead paths
E-19	Performance	Medium	Projection 6310 ms, graph 3652 ms, salary 3337 ms; slow UI loads	Budgets + caching + skeletons
E-20	Labels / codes	Low	Raw `ECL_2026`/`PAT_2026`; `AI_RECHARGE` name mismatch; dup order 10; HRA `is_hra=false`	Display names; unique order
E-21	Holidays	Low	`Invalid Day Holiday`; Diwali/Dussehra `optional`; holidays counted in `final_leave_days`	Clean seed data; fix counting
E-22	Directory names	Low	Actor names = emails; `Solid Waste Managment` typo; `EMP=002`	Resolve names; fix spelling/code
E-23	Counts / flags	Low	Dept 9 vs 16; locations 15 vs 18; hybrid vs office; punctuality 83.33 vs 87.8	Single-source stats
E-24	Cross-field flags	Low	Half-day 0 h + 322 late; OT 90 + early-exit 30; OT 60 min / ■0; viewed without timestamps	Cross-field validation

Explicitly NOT bugs (to avoid false positives): tax liability `0.00` is correct via rebate 87A (E-14); EMI `5233.19` maths checks out (E-13); Sep deduction total `7733.19` and Aug `8429.96` reconcile exactly to EMI + recovery (+ PF) — the defects are the statutory/duplicate/zero gaps around them, not the arithmetic.

4. Strategic UI/UX & Employee Experience (EX) Recommendations

1. **Self-service delighters:**

- Shift countdown + progress bar (shift 09:30–18:30, grace 15 min, full/half-day thresholds 7.5 h / 4.5 h — all already in API).

- One-tap regularization from each anomaly row, pre-filled with the anomaly's date/times.

- Leave calculator with pending-approval preview, document-threshold and sandwich-rule hints.

- "Next holiday" countdown (Festival Holiday, 15 Oct 2026) and optional/mandatory holiday filter.

2. **Design polish & micro-interactions:**

- Skeleton loaders for the slow tax/projection/salary pages (E-19).

- Animated punch-in confirmation + break timeline; clear status toasts (e.g. "Statutory pending — net pay is pre-statutory" on the Sep payslip).

- Consistent empty states with a next action (request a document, how to earn a comp-off, enrol in benefits) instead of blank tables.

- Always use display names, never raw codes (`ECL_2026` → "Executive Casual Leave") or emails as names.

3. **Mobile responsive optimisation:** calendar cells need large touch targets; attendance/leave tables should collapse to cards on small screens; the punch widget and one-tap regularization must be thumb-reachable. (Mobile layout was not directly measured — treat as a recommendation, not an observed defect.)

4. **Trust & transparency:** show the arithmetic wherever money or leave is involved (salary gross build-up, payslip reconciliation, leave breakdown, loan principal/interest split, tax projection inputs). Most High/Medium findings above are invisible-arithmetic problems, not visual ones.

5. **Data hygiene:** purge seeded probe/test rows (script-text, `TEST_PERF_BONUS`, `Invalid Day Holiday`, future 31 Dec records, duplicate adjustments) and add server-side invariants (balance arithmetic, non-negative hours, EPS formula, unique upcoming adjustments, no future attendance dates).

5. Console & Network Performance Audit

• **Network failures observed (API sweep, 55 records):** `403 Access denied` — `GET /leaves/types`, `GET /leaves/templates`, `GET /organizations/me/setup-status`. `404 Cannot GET` — `/comp-offs`, `/overtime`, `/regularizations` (bare), `/organizations/me/job-profile`, `/organizations/profile`, `/payroll/me/tax/regime`, `/documents/me`. All other swept endpoints returned 200. No 5xx observed.

• **Latency (single pass, slowest GETs):** tax/projection 6310 ms, tax/summary 3715 ms, graph-data 3652 ms, salary-structure 3337 ms, weekly-calendar 2907 ms, summary 2479 ms. Browser also reported slow page loads.

• **Console errors / warnings: NOT VERIFIED** — the live-browser tooling exposes no DevTools Console, and the API capture cannot observe client-side errors, hydration mismatches, unhandled rejections, failed assets or React warnings. Do not treat the absence of console findings here as "console is clean".

• **Duplicate requests per user action: NOT VERIFIED** (no DevTools network timeline).

• **Historical ranges beyond Oct 2026:** monthly history was verified for Oct 2026; other months were not swept (trends endpoint returned Aug–Oct summaries).

• **Payslip PDF:** verified working — `GET /payroll/me/payslips/{Sep-run}/pdf` → 200, `application/pdf`, 92,908 bytes, `payslip_2026-09.pdf`. PDF body was discarded, not saved.

Appendix — Methodology & Scope

1. Fetched the SPA shell + JS bundles from `frontend.dev.hrclouds.in`; extracted the API base (`development.hrclouds.in/api/v1`), the Employee route map (`/dashboard/employee/*`) and the API client path inventory (attendance/leave/payroll/documents/tasks chunks).

2. Logged in via `POST /api/v1/auth/login` (`identifier` + password), then `POST /api/v1/auth/select-organization` with the HR-Vista `org_id` (Bearer selection token). The account requires org selection (2 orgs).

3. Swept 52 employee-relevant endpoints with GET only, plus 2 payslip-detail GETs and 1 PDF header check. Every response was recorded in `network-capture.json` (redacted).

4. Drove the live browser through every Employee route listed in §2, opened Apply Leave / Regularization / Edit Profile modals and closed them without submitting; clicked nothing that writes, punches, downloads or pays.

5. Cross-checked UI-rendered values (browser report) against API payloads field by field; every mismatch above was confirmed in at least one API response. Where the browser returned only a summary (its full per-page report was not delivered), UI-only claims are labelled as browser-observed and API-corroborated wherever possible; nothing was invented to fill gaps.

6. **Limits:** no DevTools console/network timeline; no mobile-device testing; no second-org (Compunic) comparison; single-pass timings; test/seed data — some defects may be seed-data artefacts rather than production code defects, but each is reported with the exact observed values so the team can triage.
